

Product Name :
Pneumatic and Electro pneumatic Trainer Kit**Product Code :**
EEMRL74M0003**Description :**

Pneumatic and Electro pneumatic Trainer Kit

Technical Specification :**Description:**

This versatile equipment is designed to have integrated hands-on training aid for students to have basic principles of pneumatics and compressed air devices. This unit allows for the bread boarding of numerous pneumatic circuits to illustrate a wide selection of pneumatic circuits along with the associated lab. This system comes with Manual and instructor guide. This creates a learning experience that provides a complete and practical introduction to pneumatic technology.

The setup includes Compressor: To convert available power from electric motor or internal combustion engine to pneumatic power at the actuator.

- Valves: To control the direction of air flow to the actuators.
- Pressure and flow control valves: To control the level of power.
- Actuator: To convert potential energy of the compressed air.
- Connectors: To link the various systems components.
