

Product Name :
Structures Platform

Product Code :
GENP0001

A large, light gray watermark of the ALTEC logo is centered in the background of the main content area.

Description :

Structures Platform

Technical Specification :

- The Structures platform supports any of the optional Structures experiment modules, available separately.
- Made from precision, slotted aluminium extrusions and steel end plates, this module forms a sturdy, rigid, stable and strong experiment platform.
- Adjustable feet ensure the platform is level before use.
- The platform includes the USB interface plug-and-play hub to simplify connections.
- Easy-to-read scales on each side of the platform help students to position the parts of their experiment precisely, and removes the need for an additional rule.
- The hub converts signals from the sensors on each experiment module to USB data format for computer display and data acquisition.
- The compact size and low centre of gravity mean that students can use the equipment easily and at an ergonomic height, either sitting or standing.
