

**Product Name:** 

Bending Stress In a Beam

**Product Code:** 

GENP0016

## **Description:**

Bending Stress In a Beam

## **Technical Specification:**

- Students apply the load and measure the resulting strains.
- This product includes a Vernier caliper for accurate measurement of the beam cross-section.
- They use textbook beam equations to predict the stresses and bending moments for any given load, comparing them to measured results.
- This helps confirm the reliability of the textbook equations and the accuracy of the experiment results.
- The strain gauges connect to a strain gauge amplifier, which connects (with the load cell) to the USB interface hub of the Structures platform for computer display and data acquisition.
