

**Product Name :**  
Power System Simulator Generator

**Product Code :**  
ELPS0004

A large, light gray watermark of the ALTEC logo is centered in the background of the main content area.

**Description :**

Power System Simulator Generator

**Technical Specification :**

- The motor and generator set consists of two coupled machines mounted in the base of the control console.
- Manual or different types of automatic excitation control the output of the generator.
- A vector drive controls the speed of the motor.
- Students can set the relays from their control panels.
- The circuit-breakers also include hand-operated switches, and lamps.
- The lamps show whether the circuit-breaker is open or closed.
- Digital meters show the conditions of the prime mover and generator.
- The relays operate the circuit-breakers around the second generator.
- The relays show students how actual generators are protected and the different ways that they are protected.
- The relays also include sockets to link them to a suitable computer for more detailed programming, if needed.

- The Second Generator links to the Power System Trainer at the higher voltage (transmission) level to simulate central generation, for example main power stations.
