

Product Name :
Potential And Energy Kit**Product Code :**
MTEP0025ALTEC™**Description :**

Potential And Energy Kit

Technical Specification :

- This kit includes a pendulum, a spring and a flywheel for experiments in potential and kinetic energy.
- Students test each part to discover the difference between potential and kinetic energy and the transfer of energy from one form to another.
- The kit introduces students to key engineering terms such as 'moment of inertia' and 'elastic potential energy'.
- This versatile kit is part of a series that allows many experiments using different arrangements of their parts. Students, teachers or lecturers fit the parts of the kit to the Work Panel to study or show an engineering science topic.
