

Product Name :
Pressure Measurement Bench**Product Code :**
ALABS-A43-118A large, light gray watermark of the ALTEC logo is centered in the main content area of the page.**Description :**

Pressure Measurement Bench

Technical Specification :

- Manometers and Bourdon gauges are fundamental pressure-measuring devices.
- They are intrinsic parts of more complex measuring instruments, such as pneumatic comparators and flow indicators.
- It is important therefore that students fully understand their operation, characteristics and principles of calibration.
- It also includes a separate Bourdon gauge with dead-weight calibration apparatus, enabling clear observation of the Bourdon tube mechanism.
- Pressure Measurement Bench enables students to fully investigate and compare the operation and characteristics of inclined and U-tube manometers, and Bourdon-type vacuum and pressure gauges.
- A manometers and gauges unit.
- A Bourdon pressure gauge calibration unit.
- vertical U-tube manometer.
- U-tube manometer with an inclined limb.

- Bourdon gauge for measuring vacuums.
- Bourdon gauge for measuring positive pressure.
- syringe assembly for pressurising and reducing pressure.
