Effect And Jet Flow**Product Code :**
ATHE0008**Description :**

Effect And Jet Flow

Technical Specification :

- This module consists of an aerodynamically shaped nozzle from which a jet of air emerges.
- A second wall may be introduced at the other side of the jet, which may be switched from one side to the other, as is done in a fluidic flip-flop type switch.
- The effect of sealing the walls and adding a central splitter to the device are also investigated.
- This flows against a wall to which it attaches.
- The wall may be rotated to show the deflection of the jet through large angles due to the effect.
