

Product Name :
Jacketed Vessel and Coil**Product Code :**
ATHE0013**Description :**

Jacketed Vessel and Coil

Technical Specification :

- This heat exchanger mimics those used in the process industry.
- The unit has an extra thermocouple to measure the batch temperature.
- It also has a motorised stirrer to show how stirring affects heat transfer.
- Continuous feed to the vessel for heating or you set a fixed batch for heating.
- It can show heat transfer by using the outer skin (or 'jacket') of the vessel, or by a coil inside the vessel.
- All fluid connections between the Service Module and the heat exchanger are self-sealing quick connectors – for safety and simplicity.
- The hot and cold fluid streams have different connectors to reduce errors.
