

Product Name :
Ball Penetration Apparatus**Product Code :**
CVLE0031**Description :**

Ball Penetration Apparatus

Technical Specification :

- The apparatus is used to determine the workability of Portland cement & concrete.
- Considered to be simple and much faster than the slump test.
- A strip frame, guides the handle and serves as a reference for measuring the depth of penetration.
- The handle is graduated in mm. Penetration can be recorded to the nearest 0.5 mm.
- Twice the Kelly ball reading approximately equals the slump.
- It consists of a cylinder with a ball shaped bottom and handle, together weighing 15 kg.
