

**Product Name :**  
Basic Pneumatic Experiment

**Product Code :**  
MCHT0001

**Description :**

Basic Pneumatic Experiment

**Technical Specification :**

This training device is designed for pneumatic training and meets the requirements of modern pneumatic transmission. Students can learn basic pneumatic circuit control knowledge and practice hands-on skills. Pneumatic training combines knowledge of pneumatic and mechanical transmission. Suitable for colleges, engineering schools, technical schools, vocational schools, engineering training centers, factory training departments, etc. Through the study of this course, students can master the structure of pneumatic components, the principles of pneumatic control, and the design of pneumatics, and master the operation skills of pneumatic training equipment. The training equipment is flexible and safe, and students can design their own pneumatic circuits.
