

Product Name :
Installation Technology Losses in Valves and Fittings

Product Code :
THML0003

Description :

Installation Technology Losses in Valves and Fittings

Technical Specification :

- trainer for heating and sanitary engineering
- pressure losses in standard valves and fittings

Pressure losses occur in pipe systems as a result of friction and turbulence. In practice, the use of shut-off valves and fittings causes pressure losses that need to be taken into consideration when designing pipe networks.

The unit can be used to investigate the pressure losses of different shutoff valves and fittings. The pipe elements used are commercially standard components in heating and sanitary engineering. The clear panel is mounted on a sturdy, movable frame.
