

Product Name :
Training Bench for Sensors**Product Code :**
MCHT0023**Description :**

Training Bench for Sensors

Technical Specification :

Sensor training equipment is widely applicable, intuitive is strong, the way is flexible, module structure, completely using industrial production actual sensor components, it is training innovation type, open system. It can make students know modern production test and control actual situation at school, through study and actual assembly, development and design, students can master sensor technology all aspects application technology. It is easy for students start work when go to factory, exposing problems, solve problems, learn more practical knowledge and hand on ability, development thinking, and improve practical ability and actual operation ability, so that students after graduation can directly production practice, shorten the past when they graduate students practical ability weak defect, so as to adapt to requirements of modern measurement and control.

This training system not only for students, but also for industrial electrical, mechanical and electrical integration engineering, electrical and mechanical equipment installation, power electrical and electronic equipment installation, automation processing, regulation and control technology and technical personnel, for machinery manufacturing and electrical engineer training, the process and the process management electrical engineer training is the same.
