

Product Name :
Industrial 4.0 Robot Trainer**Product Code :**
MCHT0033**Description :**

Industrial 4.0 Robot Trainer

Technical Specification :

This device contains six degrees of freedom of industrial robots, sensor detection system, PLC control system and a set of feed, transportation agency, can realize the transmission of the workpiece pallet, testing, handling, operation, etc.

The various components of the platform are installed on the profile table, mechanical structure, electrical control circuit, and actuator are relatively independent, and adopt industrial standard parts design. Through this platform can be mechanical assembly, electrical circuit design and wiring, PLC programming and debugging, robot programming aspects of training, suitable for vocational colleges, vocational school automation or related professional industrial robots and control technology, automation technology and other courses of practice teaching, suitable for automation engineering technology personnel training and skills contest.
