

Product Name :
Compressed-Air Dehumidification Trainer

Product Code :
RCTE0008

Description :

Compressed-Air Dehumidification Trainer

Technical Specification :

This trainer is designed to conduct cooling and dehumidification on compressed air, cooling compressed air to required dew point temperature, and make inside vapour water into liquid water, and then using gas-water separator to separate out liquid water, finally obtain dry compressed air. This equipment takes typically general refrigeration circulation principle, using water as medium, filter water in compressed air. This training equipment simplify data acquisition process, using proper sensor and processor to show experiment data on computer.
