

Product Name :
Central Air Conditioner Trainer

Product Code :
RCTE0032

Description :

Central Air Conditioner Trainer

Technical Specification :

Central air conditioning examination device training system USES water chilling unit, stainless steel frame structure, terminal set up a special room for customer's simulation, simulation of the hall directly using the original space, using water segregator and Siamese on cold quantity or heat distribution adjustment, the entire central air-conditioning the mitsubishi FX2n - 48 MR (or CPU - 226), Siemens PLC programmable controller and industrial bus control, by computer through the communication bus to communicate with PLC, the operation of the control of the central air conditioning. The operation parameters of air conditioning are collected by various kinds of sensors and sent to the computer through the communication bus, which can be monitored in real time through the special central air-conditioning control software. The configuration software requires that the system's device structure, control principle and flow can be synchronized with animation.
