

**Product Name :**  
Faults Simulation Bench On Refrigeration System

**Product Code :**  
RCTE0034

**Description :**

Faults Simulation Bench On Refrigeration System

**Technical Specification :**

The training device used for further study of common refrigeration compression cycle. Condenser and evaporator fan are with eight pieces of transparent pipe and fan which speed is adjustable, it can directly observe the condensation and evaporation process of refrigerant in the system, intuitive response under the same conditions of 4 kinds of refrigerants refrigeration change under different throttling device, and through the fan speed change of the condenser and evaporator heat transfer effect, under different conditions of refrigerant refrigeration.
