

**Product Name :**  
Calibration of Pressure Gauges**Product Code :**  
FUDE0029**Description :**

Calibration of Pressure Gauges

**Technical Specification :**

- operation of a Bourdon tube pressure gauge and a piston manometer

In the field of metrology, calibration describes a process for detecting deviations in a measuring instrument compared to a reference instrument or universally accepted standard value. This observed deviation is taken into account in the subsequent use of the calibrated measuring instrument and adjusted if necessary.
