

Product Name :

Impulse Turbine

Product Code :

FUDE0067

**Description :**

Impulse Turbine

Technical Specification :

The equipment includes a turbine rotor with four nozzle-shaped outlets. The rotor is installed in a transparent housing. Air flows through the outlet nozzle of the turbine rotor, expanding and accelerating. According to the reaction principle, the turbine rotor was driven by the wind wheel. The torque determined by the load unit is placed in the external housing.

1.2 Features

Box structure, simple structure, equipped with multiple pressure gauges and data display, easy to read data.

The partially transparent material of the turbine makes it easy to observe the experimental phenomenon.
