

Product Name :
Hot Water Generator**Product Code :**
THML0011**Description :**

Hot Water Generator

Technical Specification :

Setup of a complete domestic heating system together with Comparison of different heating types

Features

- setup of a complete domestic heating system together with Comparison of different heating types
- boiler with oil burner, oil tank and burner control
- design with high practical relevance by using commercially available heating technology components Learning objectives/experiments
- setup of a hot water heating system for room heating
- function and design of commercially available components
- boiler with oil burner, burner control and safety devices
- measurement of differential pressures and temperatures
- together with Comparison of different heating types
