

Product Name :
Finned Tube Heat Exchanger Water/Air**Product Code :**
THML0027**Description :**

Finned Tube Heat Exchanger Water/Air

Technical Specification :

Tubular heat exchangers are often used for heating or cooling gaseous media, such as air coolers for internal combustion engines. Hot water flows in the tubes, which are surrounded by a flowing gaseous medium, e.g. cold air. The hot medium emits some of its thermal energy to the cold medium.

The tubes are fitted with fins in order to increase the heat transfer surface and thus improve the convective heat transfer.
