

Product Name :
Jacketed Vessel With Stirred And Coil

Product Code :
THML0031

Description :

Jacketed Vessel With Stirred And Coil

Technical Specification :

1.1 Product Introduction

The equipment is part of a series of devices capable of performing experiments on different types of heat exchangers. The jacketed heat exchanger consists of a tank surrounded by jackets. The water tank is equipped with coils. In the heating mode with jacket, hot water flows through the jacket and transfers part of the heat energy to the cold water in the water tank. In the coil heating mode, hot water flows through the coil to heat the cold water in the water tank. The blender can be used in all modes.

1.3 Features

The structure is simple and it is easy to observe the running status of the equipment.

There are many connection interfaces, which can be used with other devices, light weight, easy to carry.
