

Product Name :
Wind Power Generator Trainer

Product Code :
RENV0021

Description :

Wind Power Generator Trainer

Technical Specification :

This training equipment consists of six unit systems: power generation unit, charging unit, power storage unit, inverter module, control unit, and load unit. You can be familiar with the basic knowledge of wind power generation and the installation, commissioning, operation, maintenance, and fault analysis. Have an understanding and analysis of fault diagnosis, master its principles and control methods, and cultivate students' corresponding knowledge and skills. It is suitable for teaching and skill training assessment of related majors in higher vocational schools, colleges, secondary vocational schools and technical schools.
