

Product Name :
Electronics Training Workbench**Product Code :**
ELTC0041**Description :**

Electronics Training Workbench

Technical Specification :

This equipment is to be used in technical schools, vocational schools and colleges for 228 electric experiments include diode and triode circuit, sine oscillation circuit, DC coupling amplifier and integrated operational amplifier circuit, DC power, controllable silicon and trigger circuit, digital circuit and others.

1. Student table: size 160*80*75cm, there is a drawer on each side of the table with sockets and components retaining panel in it. The middle drawer is to keep tools, multi-meter, wires, instructions , etc. On the table, a general circuit board is laid in the middle, which is size of 150*70cm. There is four lines of sockets, which can be used to connect the components and electric appliances in required circuits.

2.Components and Sockets: as a basic component in the circuit, it has component code, component, powered socket and injection mold testing hole. It is to be used with general circuit boards. Student can connect components with the socket to form a circuit . It needs no welding at all. It is very easy to change the circuit or its component parameters.
