

Product Name :
Linear Circuit Lab

Product Code :
ELTC0049

Description :

Linear Circuit Lab

Technical Specification :

The electronic training device, including the basic electrical experimenter, includes a host and a template unit. The host unit includes various measuring instruments, waveform generators, and power modules; the template unit has eleven templates each containing an eight-digit DIP switch, so the experiment on each template can use this switch to arrange appropriate faults. Let students practice troubleshooting. See Appendix 1 for the relative position of the fault repair switch. The fault switch of each template is factory-based, based on the principle that the circuit works normally. Place the switch in the normal position after troubleshooting.
