Product Name :	**Product Code :**
8086 Microprocessor Trainer	ELTC0089

Description :

8086 Microprocessor Trainer

Technical Specification :

This 8086 Microcomputer/single chip computer teaching experiment system is according to the requirements of scholars and many experiment in colleges and universities, combined with the electronic development and developed with development, application and experiment with the combination of high-tech equipment. The aim is to improve the development of electronic science and technology in China as soon as possible, improve the ability of the experimenter and solve the problem. The system has the following characteristics:

1. CPU can choose any type of CPU in 80C31, 8086, 80C196. The system is fully functional and covers most of the teaching experiment courses of microcomputer/MCU.

2, the system adopts modular structure design of open mode, through two sets of relatively independent bus maximum extension 2 application experiment board at the same time, the user can according to need to purchase the corresponding experiment board, reduces the cost, improve the flexibility, easy to upgrade.
