

**Product Name :**  
Pressure Measuring Bench

**Product Code :**  
ELTC0112

**Description :**

Pressure Measuring Bench

**Technical Specification :**

The Pressure Training System is a single loop pneumatic control system. It enables the study of the principles of both pressure regulation of a process and the control of flow in a pressurised system.

The System comprises a low pressure air circuit supported on a panel for use on a benchtop, making it suitable for individual student work or for group demonstration. The Pressure Trainer requires a compressed air supply at a recommended input pressure of 40psi. An input filter/drier is used to clean the supplied air. Separately regulated branches provide air for the process and for valve control.
