

Product Name :
CNC Milling Machine Comprehensive Training Workbench**Product Code :**
ELTC0146**Description :**

CNC Milling Machine Comprehensive Training Workbench

Technical Specification :

With the wide application of numerical control technology, the school pays more and more attention to cultivating practical and skilled professionals in production, technical service and other positions, further improving students' practical ability and analyzing problem-solving ability, and comprehensively learning and mastering the control of CNC system.

Principle, numerical control programming, electrical design methods and installation, commissioning and maintenance. However, most colleges face the lack of such CNC training equipment.

To this end, the company developed the principle of the electronic control system of the CNC milling machine and the internship device for the commissioning and maintenance test bench.

Using this device, students can master the control principle of CNC milling machine system, electrical design method, component selection, electrical installation and debugging of milling machine, fault diagnosis and maintenance, part programming and graphic simulation processing, etc. Internship effect.

The main components of the experimental device are industrial control products.
