

Product Name :
Transformer, Motor Maintenance and Detection Trainer

Product Code :
ELTC0163

Description :

Transformer, Motor Maintenance and Detection Trainer

Technical Specification :

1. The training device consists of a three-phase AC adjustable power supply, a DC power supply and an AC/DC measuring instrument. At the same time, special removal tools such as motor embedding tools and manual digital winding machines are used. Through relevant experiments, you can familiarize yourself with the operating characteristics of the transformer, master its control principle and control method, and cultivate students' corresponding knowledge and skills.
