

Product Name :
Power System Protection Training System

Product Code :
ELTC0221

Description :

Power System Protection Training System

Technical Specification :

Supply, install and debug complete power system protection training system for KDU. The power system protection training system should adopt a modular design method and have computer-based data collection and control functions to provide students with basic power technology knowledge with unparalleled power system protection training.

2. All equipment and materials provided shall meet the following conditions:

Climate/working conditions (completely tropical conditions)

The maximum ambient temperature is 40C.

The average ambient temperature is 35C.

Average relative humidity 70%-90%

230V AC single phase 50 Hz
