

Product Name :
Hospital LCD Display Electrothermal Thermostatic
Incubator**Product Code :**
HOSPITALLAB70052**Description :**

Hospital LCD Display Electrothermal Thermostatic Incubator India China

Technical Specification :

This incubator, also known as electrothermal thermostatic cell (mildew), is applied in medical institutions, pharmaceutical industry, biochemistry, industrial production and agricultural science for bacterial incubation, breeding, fermentation and other thermostatic experiment.

LCD display, a series of data displayed showed in one window.

Microprocessor PID temperature controller.

Timing range: 1~9999min

Polished stainless steel chamber, easy to clean.

Cold-rolled plate with power coating.

Shelves can be adjusted easily.

Double door design. Inner door is made of tempered glass for observation.

Door heating to avoid water condensing on the inner glass door.

Forced convection for a better temperature uniformity.

Magnetic door sealing.

Castors are equipped for easy movement.

Over-temperature protection, temperature sensor malfunction alarm.

Parameters auto-save when there is a power interruption or system breakdown.
