MEDICALLAB710003**Description :**

Factory Price Anaerobic Cultivation Non-Oxygen Incubator India China

Technical Specification :

This instrument is used for a non-oxygen environment to cultivate and handle anaerobic microbes. It can provide a strict anaerobic and constant temperature condition and a systematic and scientific working area. The most difficult microbe can be cultivated in this instrument and can avoid the death of culture caused by being exposed to the atmosphere during operation. This can be applied for medical institution in inspection and research of pathogenic anaerobic bacterium, microbiological examination brewing of food hygiene, and other hypoxia, microaerobic, or oxygen-free environment.

This product is composed of constant temperature incubation chamber, anaerobic operation room, sampling room, gas and electricity control system, bottle holder and disinfector, etc. It's ingeniously designed to form a stable anaerobic environment in the operation room.

Microprocessor intelligent temperature controller with over-temperature protection.

UV lamp is equipped for gas disinfection.

The gas flow can be adjusted for different inlet gas.

Operation room is made of stainless steel and the front door is made of thick transparent shockproof special glass.

Dedicated gloves for a comfortable and flexible operation.

Operation room is equipped with special loop-carrier disinfectant, experiment shelves, wax melting disinfectant and oxygen eliminating catalyst.

The gas flow can be adjusted for different inlet gas.

Operation room is made of stainless steel and the front door is made of thick transparent shockproof special glass.

Dedicated gloves for a comfortable, flexible operation.

In the operation room it's equipped with melting disinfectant, experiment shelves, and oxygen eliminating catalyst.
