

Product Name :
Sphygmomanometer Digital Wrist Model**Product Code :**
HALTH1090008**Description :**

Sphygmomanometer Digital Wrist Model

Technical Specification :

This unit adopts the oscillometric technology with Fuzzy Algorithm measuring the arterial blood pressure and pulse rate.

The wrist cuff is wrapped around the wrist and automatically inflated by the air pump.

Fuzzy Algorithm is the processing algorithm taking into account the difference in individual heartbeats which provides high accuracy of measurement.

The sensor catches weak fluctuation of the pressure in the wrist cuff produced by extension and contraction of the artery in response to each

heartbeat.

Feature :

Automatically inflates to correct pressure

Display of systolic pressure, diastolic pressure and pulse rate simultaneously

Automatic power off after 3 minutes of no operation

90 sets of memories

Low battery indication

One-touch operation.
