

Product Name :
Refrigeration Test Rig**Product Code :**
ALABS-A88-007**Description :****Refrigeration Test Rig**

The set up demonstrates the students about the basic principal of a refrigeration cycle. The test rig is designed for the study of thermodynamics of vapour Compression refrigeration cycle by way of demonstration and experimentation. It has a facility to measure various parameters for experimentation.

Experimentation:

- To calculate refrigerant capacity.
- To Study the Vapour Compression refrigerator cycle.
- To Calculate Co-efficient of performance and draw P-H Diagram.

Utilities Required :

- Electric supply 5A-220 V AC

- Water supply and drainage
- Floor area : 1.5 m x 1m
