

Product Name :
Soil Permeability Apparatus**Product Code :**
ALABS-A95-005**Description :****Soil Permeability Apparatus**

Our Permeability Test Apparatus controls the rate of settlement of saturated compressible soil layers and the rate of flow of aquifer. As permeability depends on various factors, the accurate measurement can be carried out with the use of apparatus called permeameter. Our product is used for testing remoulded or undisturbed fine grained soil that has a maximum particle size of 10mm.
