**Description :**

Thermal Conductivity Of Insulating Powder

**Technical Specification :**

Thermal Conductivity Of Insulating Powder

This apparatus is designed to determine the thermal conductivity of insulating powder. The apparatus consists of two thin walled concentric copper spheres. Inner sphere houses Nichrome Wire heater

Insulating powder is filled between the two spheres

Heat flows radially outwards. Temperature sensors at proper positions are fitted to measure surface temperatures of spheres

Heat input to the heater is given through a variac and measured by Digital Voltmeter & Digital Ammeter. By varying the heat input rates, data can be obtained

Experiment:

Determination of thermal conductivity of insulating powder

Comparison of thermal Conductivity of insulating powder at different temperatures

Utilities Required:

Electricity Supply: 1Phase, 220 V AC, 2 Amp.
