

Product Name :
G By Free Fall Apparatus**Product Code :**
ALABS-A156-033**Description :****G By Free Fall Apparatus**

The free fall apparatus comprises two units, each of which is mounted on a plastic base, which can be clamped on a 13mm diameter retort rod. Connections are brought out to 4mm sockets.

The solenoid unit has a mumetal core, which ensures prompt release of the ball on de-energising. The gate switch unit comprises a hinged steel plate, which is held against an adjustable contact by means of a small permanent magnet, so that, by proper adjustment, the plates fall away promptly at the impact of the falling ball.
