

**Product Name :**  
Ray Optics Kit**Product Code :**  
ALABS-A156-052**Description :****Ray Optics Kit**

A Ray box kit also known as a Light box kit is used to understand various optical properties. These optical properties are made practically visible and more erudite using a ray box/light box kit. A ray box/light box kit is a simple enclosed box (one side open) consisting of an incandescent bulb, various detachable slides, lenses, mirrors and color filters. These slides and lenses when used individually in a ray box/light box produce various optical properties which are determined by analyzing the distinct paths of light rays coming out of the ray box/light box.
