

Product Name :
Hookes Coupling Apparatus**Product Code :**
ALABS-A179-097The image shows a large, light gray watermark of the ALTEC™ logo centered on a white background. The logo consists of a stylized 'A' inside a square, followed by the word 'ALTEC' in a bold, sans-serif font, and a trademark symbol (™) to the upper right.**Description :****Hookes Coupling Apparatus**

The table model demonstrates the transmission of angular motion to joint shafts, the related gimbal error and how this error can be rectified using Hooke's couplings. The model consists of two Hooke's couplings that are connected by a split intermediate shaft. The deflection angle of both joints can be set individually and read on the scales. Drive is achieved by turning a hand wheel. On the drive and power take-off sides there are further angle measuring scales made of transparent plastic with which the difference between the angles of the shafts can be determined.

Specification:

1. Benchtop experiment on gimbal error and its avoidance on articulated joints
2. Hooke's coupling, standard industrial parts
3. Scales made of transparent plastic
4. Ball bearing mounted shaft ends.

5. Solid, painted base plate

6 lwxh 360x280x185mm

Technical Data:

- Shaft diameter: D=16mm

- Scale disc diameter: D=100mm
