

Product Name :
Air Compression Fire Generator**Product Code :**
ALABS-A187-007**Description :****Air Compression Fire Generator**

This device is used to illustrate that pressure and temperature are related. When you press down quickly on the plunger, air is compressed inside the tube, igniting a cotton ball. The fire then instantly goes out, because all of the oxygen in the tube is exhausted. Can be used to illustrate the kindling point of a material. Built of rugged plastic, the chamber comes apart for easy cleaning.
