

Product Name :

Venturi Tube

Product Code :

ALABS-A187-012

**Description :****Venturi Tube**

This apparatus consists of a water reservoir and a Venturi tube with manometers. The pressure is measured at three points along the tube. Rubber pipes are attached at the two ends. The ends of tube are kept high enough so that the water will not flow to show that the level is the same in all the manometers under static conditions.
