

Product Name :
Simple Form Capacitor**Product Code :**
ALABS-A133-092**Description :****Simple Form Capacitor**

A simple and economical device for introducing the basic concepts of capacitance to students. The apparatus consists of two formed aluminium plates, each provided with a 4mm screw terminal at its rear. The capacitance surfaces facing one another are about 10cm square. Demonstrates the effect of varying dielectric thickness and the separation between the two conducting plates on the electric field between them
