

Product Name :
Toggle Joint Apparatus

Product Code :
ALABS-A167-075

Description :

Toggle Joint Apparatus

- Determines the horizontal reaction due to loading a toggle joint mechanism; assesses the effect of the toggle angle.
- The apparatus consists of two pair of links mounted on a base with one end of the links fixed, a central pivoted joint, and the other end restrained by a spring balance to read the resulting horizontal force.
- Loading applied at the apex pivot by a weight hanger.
- Variable toggle angles available, and facility to re-adjust to original state.
- An instruction manual for student and lecturer provided.
- Set of weights.
- 1m ruler supplied
- 2 year warranty
