

Product Name :
Klystron Microwave Test Bench

Product Code :
ALABS-A36-018

Description :

Klystron Microwave Test Bench

This **Gunn Diode Microwave Test Bench** is very impactful for low Power transmitters and local Oscillator that find applications in the detection of moving targets. Finding wide usage especially in speed control radars, radar detectors, intrusion alarm systems, door openers and commercial marine navigational radar, these can also control applications such as near object direction for vehicles, and door openers.

Experiments:

- Study of gunn oscillator and gunn diode
- Measure frequency, guide wavelength
- Measure standing wave ratio, reflection co-efficient

- Measure unknown impedance
