

Product Name :
Energy Transfer Kit**Product Code :**
ALABS-A85-737**Description :**

Energy Transfer Kit The energy transfer kit comprises several separate units, which enable wide range of demonstration experiments in energy transfer / conversion, permitting the user to show qualitatively energy conversion from one form of energy to another in a various different ways. All units with pulleys are mounted on the bases of same size to assist alignment of pulleys and provided with 4mm socket terminals wherever needed for electrical connection. All units, where motion is required to be transferred through external means, are provided with a pulley to the central shaft carrying the accessory, except Turbine/Pump Unit. Large Motor/Generator: For use as a driving unit or dynamo. Comprises a low voltage, permanent magnet, DC motor, provided with a pulley. Supplied with driving belt.
