**Product Name :**  
Relay Control Trainer

**Product Code :**  
EEATC030

**Description :**

Computers can be used as dedicated controllers for a variety of uses but an interface is needed to connect them to the real world. This Trainer controls 8 electromechanical relays using USB – UART interface and Microcontroller. Each relay is switched on or off by output data (8 bits) sent by PC software. The software provides a graphical user interface to control relay operations, their control sequences with LED indication and simulations.
