

Product Name :
Inverted Pendulum Control Trainer**Product Code :**
EEATC031**Description :**

Inverted pendulum system is a nonlinear unstable system, an ideal experiment platform for teaching control theories and conducting various control experiments. An inverted pendulum is also a research area for many researchers of modern control theories. The linear inverted pendulum Trainer adopts an open control solution and a modularized experiment platform. With the linear motion module as the base platform, it is easy to build more than 10 teaching and experiment control platforms, satisfying the various needs for control teaching and research
