

Product Name :
Electrical Power Utilization Trainer

Product Code :
EEATC034

A large, light gray watermark of the ALTEC logo is centered in the background of the main content area.

Description :

Large energy consumers like industrial plants, processing plants and manufacturing units are required to provide compensation for reactive power used by them. Modern electrical control circuits also generate harmonics in the network.

This laboratory addresses the topics like reactive power compensation, reactive power controllers, measurement of electrical energy in three phase networks, cost of power consumed by the customers. These topics are analyzed from the theoretical point of view and also by means of practical examples.
