

Product Name :

AC Conversion

Product Code :

EEATC041

ALTEC™**Description :**

Use of solid-state electronics to control and to convert electric power is a popular subject. It also refers to subject of research in electronic and electrical engineering which deals with design, control, computation and integration of nonlinear, time varying energy processing electronic systems with fast dynamics. This series covers the basic classification of Power Conversion Systems namely AC/AC Conversion, AC/DC Conversion, DC/DC Conversion and DC/AC Conversion. Each section contains modules with power supplies and measuring instruments to form a complete testing and training equipment.
