

**Product Name :**

RF Trainer

**Product Code :**

EEATC093

**Technical Specification :**

Radio Frequency Trainer has been designed to act as basic tool for performing experiments in the field of RF & Microwave Engineering. This system is specially developed to provide an innovative approach to microwave circuits and systems. The trainer comprises the fundamental passive and active monolithic microwave integrated circuit (MMIC) building blocks, used in modern microwave radio, radar and satellite communications systems.
