

Product Name :
Water Circuit Board**Product Code :**
ALTECEDULABA0295**Description :****Water Circuit Board**

This is an analogue apparatus to illustrate electrical current flow. It consists of a large board on which is mounted a low-voltage electric pump, connected to 4 mm socket terminals, which circulates the water through the 'circuit'. The circuit is of clear plastic tubing connected to glass tubes of differing bores representing resistance. Across the 'resistances' is connected a detachable manometer to show the 'potential difference'. Following the resistance is a taper-ended tube discharging into a funnel so that the rate of flow representing the current may be shown.

Dimensions of board 590x320 mm approx.

Dimensions of manometer 275x155 mm approx.
